

# Using a Motion Sensor...

We can add motion sensors to our creatures to make them stop. If something steps out into the creature's path, it will come to a standstill.

Here is how to add the code for the motion sensor...

- ① *START the Motor CLOCKWISE*
- ② *WAIT until the Motion Sensor SENSES MOTION*
- ③ *Make the Motor STOP*

## WILDLIFE – THINK ABOUT...

- We can't re-program real wildlife BUT what could we do to keep wildlife safe around our busy roads?
