

SPIKE Prime Program

Colour Detector

If you were not able to download and run the Program Example, you can create the code inside the SPIKE Prime App using the program below. But the first thing you will need to do is set up the **Variables**. Simply click on the **VARIABLES** section on the left of the screen and **make** variables named: **Blue**, **Green**, and **Red**.

For this program you will also have to click on the  icon (bottom left of screen) and select the **More Sensors** extension.
